

Dear Colleagues,

As you know, there is no lab for this course, consequently the course will be divided to theoretical and exercises parts. Therefore, the exercises in the slides should be corrected during the class not as assignments.

Please use the software **Flowgorithm** (introduced in the slides), which will allow the students to better understand the principles of problem solving.

The final exam will include all the subjects: **tracing, decision structures, loops, etc.**

Please don't hesitate, if you have any suggestions or exercises to share.

Best regards,

Atef
